EDUCATION

University of Louisiana at Lafayette

Lafayette, LA

Bachelor of Science in Computer Science — GPA 3.9

EXPERIENCE

TexBioMed

May. 2026 – Present

Undergraduate ML / Healthcare Researcher

Lafayette, LA

- Developed a machine learning prototype using Pytorch to predict recommended next-step care actions for Alzheimer's patients using clinical and cognitive patient data to assist doctors and caregivers with patient care.
- Cleaned, selected, and organized features from the NACC dataset, including demographics, diagnosis indicators, cognitive scores, functional assessments, and caregiver-related variables.
- Built a Streamlit demo interface and presented the project to local stakeholders, explaining the model's purpose, limitations, and potential healthcare impact.

ESG-Grid Research Project (CAPE Program)

Jan. 2026 – May, 2026

Backend Developer

Lafayette, LA

- Design and maintain scalable backend services using Python, Django, and Django Ninja, implementing input validation and error handling to ensure reliable data pipelines and application logic.
- Participate in Agile development meetings, contributing to sprint planning, task breakdown, and feature implementation.
- Contribute to containerized deployments using Docker and collaborate through Bitbucket with pull requests and structured code reviews.

TurboTax

Feb. 2024 – Mar. 2025

Technical Assurance Specialist

Lafayette, LA

- Conducted quality reviews of **30+** daily tech support interactions to ensure accuracy and compliance, resulting in a noticeable improvement in resolution consistency.
- Collaborated with support and product teams during peak tax season to test new platform features, helping ensure on-time rollout with minimal defects.

PROJECTS

InterviewIQ | Python, Flask, OpenAI API, AWS (Lambda, S3, API Gateway), GitHub

Dec. 2025 – Present

- Designed and deployed a serverless interview coaching app using AWS Lambda, API Gateway, S3, and Flask to handle audio uploads, secure processing, and OpenAI speech-to-text transcription.
- Implemented structured JSON-based feedback scoring logic to evaluate clarity, pacing, response organization, and behavioral interview performance.

Audyo | Python, Flask, Stripe, AWS (Beanstalk, Cognito, Polly, Route 53), SQL, GitHub

Sep. 2025 – Dec. 2025

- Built and deployed a cloud-native full-stack text-to-speech application leveraging AWS Elastic Beanstalk, RDS, Polly, Cognito, and Route 53 for scalable infrastructure and secure authentication.
- Integrated Flask backend with Stripe payment processing, implementing secure tiered subscription plans and user management for seamless monetization and access control.

Scrap Collector | C#, Unity, Steam API, GitHub

May 2025 – Jun. 2025

- Developed and launched an indie game on Steam, reaching **10,000+ total units distributed**, **8,000+ unique users**, and **4,000+ wishlists** through full-cycle product development and release ownership.
- Built reusable gameplay systems using common software design patterns and improved player experience through feedback-driven updates, achieving a **109-minute median playtime**.

TECHNICAL SKILLS

Languages: Python, C#, SQL (PostgreSQL), HTML/CSS, Java, JavaScript

Frameworks: Flask, FastAPI, .NET, Django, Pytorch, Streamlit

Cloud & DevOps: AWS (Lambda, S3, API Gateway, RDS, Elastic Beanstalk), Docker

Tools: Git, GitHub, Bitbucket, VS Code, PyCharm, Jupyter Notebook

Concepts : REST APIs, OOP, Agile/Scrum, Serverless Architecture, ML Fundamentals, RAG
